

PNEUMATIC CONTROL VALVES

PV928

(V928 hygienic angle valve with linear actuator PA series)

DESCRIPTION

The PV928 are two or three way control valves with angle connections, specially designed for food, chemical, pharmaceutical and cosmetic industries among others. The PA pneumatic actuator features a rubber diaphragm and multi-springs. Its action can be DA - direct action (air to close) or RA - reverse action (air to open). The PV928 valves have been designed to ensure an accurate control in any process condition and they have self draining design.

MAIN FEATURES

Quick disassembling through clamp body bonnet coupling.
Completely manufactured from bar stock material.
Valve bonnet permanently attached to the body, removal is unnecessary for replacing the actuator.
Metal to metal or soft sealing.
Self draining design.

Two way design with two main valve bodies each one with an horizontal connection.

The valve seat is placed between the two main bodies.

Configuration with overlapped connections only possible for tube weld design.

V928 Type MV

Three way valve design with two main valve bodies and with a bottom vertical connection.

This valve can be used for mixing or diverting.

V928 Type MH

Three way valve design with three main bodies and all the connections on the horizontal plan.

This valve can be used for mixing or diverting.

V928 Type D

REMARKS:

(1) Indicate actuator code.

(2) Full description or additional codes have to be added in case of non-standard combination

ADCAPure control valves are identified by a serial number on a nameplate, located on the valve and/or actuator yoke.

When ordering spares, always use that serial number. If the valve has non-standard extras, the serial number also has an E (extras).
